

ABSTRACT

A preferred embodiment of the invention permits a user to load two images into a computer system so that two images may be combined into a stereoscopic image pair. An additional embodiment permits a user to load a single 2D image into the system to be combined into a stereoscopic image pair. An additional embodiment permits a user load a single 2D image to be loaded into a computer to be morphed into a stereoscopic image pair. The term "morphing is derived from the term metamorphosis. Morphing refers to the process of gradually changing one visual image to another or merging two or more images into a single image.
